The Retroreflective Equipment Manufacturers Association

## What type of application would you like?

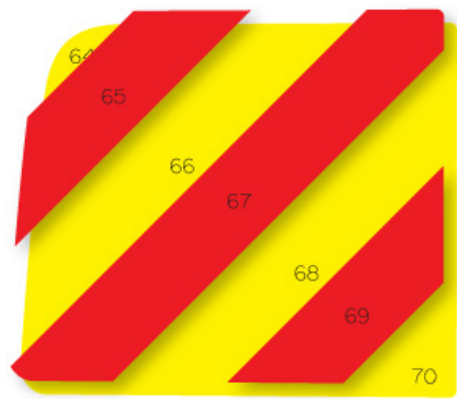

When it comes to the application of Chapter 8 kits, some of this comes down to personal choice and some comes down to necessity. Choose from Chapter 8 kits for quick application, temporary use and applications that give you complete control too. Fleet ID offer four different kit types – planked, flooded separate, flooded applied and magnetic.

**The Planked Chapter 8 Kit**

Planked Chapter 8 kits are supplied as individual fluorescent and reflective strips taped together, for ease of application.

This also allows easy removal and replacement. If any of the strips need replacing, whether due to accident damage or reduced performance, only the strips affected need to be replaced.

**The Flooded Separate Chapter 8 Kit**

Flooded separate kits are supplied to you as cut red reflective strips with large full pieces of fluorescent yellow. Simply apply a section of fluorescent yellow and then apply the appropriate strips of reflective over the top of that section.

**The Flooded Applied Chapter 8 Kit**

Flooded applied kits are supplied as large sections of fluorescent panel with reflective red strips already applied. This is possibly the quickest type of kit to apply to a vehicle.

**The Magnetic Chapter 8 Kit**

For those who need a temporary solution, the magnetic kit is perfect. Supplied as large magnetic sections of the Chapter 8 kit, this can be applied and removed as and when needed.
